Adobe I/O

APIs

Authentication

Open Source

Blog

Console

APIs and SDKs for all Adobe products – create mobile, web and desktop apps.

Adobe Creative Cloud

Extend Creative Cloud apps and integrate Creative Cloud API services. Learn about the [Creative Cloud Platform](#).

Adobe After Effects

Learn more about the After Effects SDKs, download developer documentation, and browse through other development resources available.

Adobe Animate

as part of Custom Platform SDK. Learn how to implement API for extended Animate functionality.

Adobe Audition

Adobe Audition plug-in and panel software development kits (SDKs) allow you to build plug-ins and panels to enhance and extend the capabilities of Audition.

Adobe Bridge

Adobe Bridge SDK enables developers to integrate with and extend Bridge capabilities. Learn more.

Adobe Camera Raw

Adobe Camera Raw SDKs allows you to create DNG images, and distribute Presets and Profiles for use inside of ACR, Lightroom Classic, and

Adobe Dreamweaver

Adobe Dreamweaver API lets you perform various supporting tasks when developing Dreamweaver extensions. Learn more.

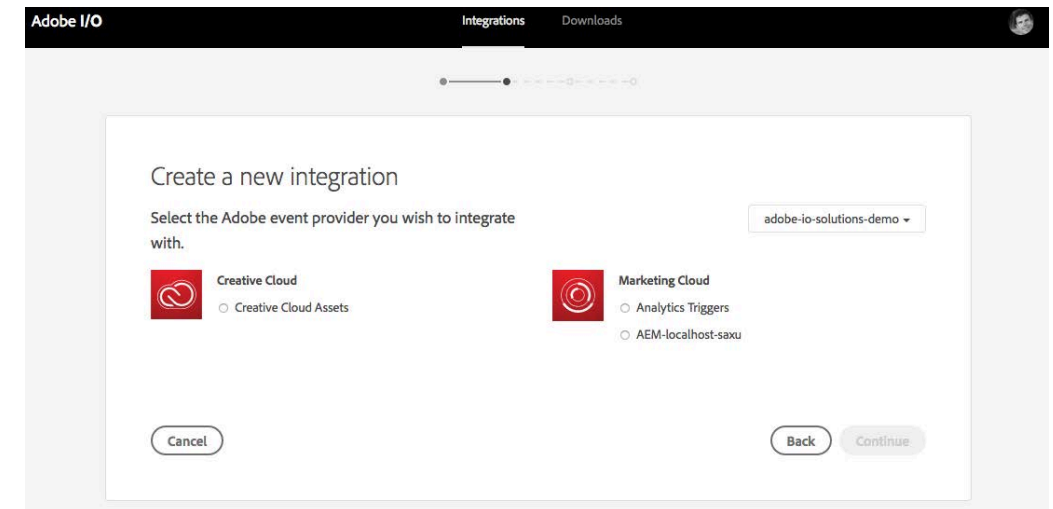

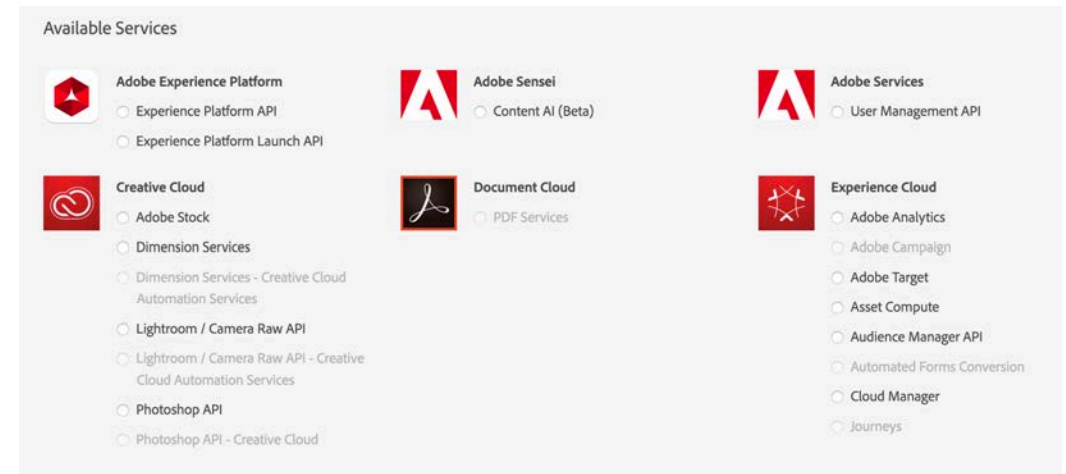

Adobe I/O Console

<https://console.adobe.io/home>

Adobe I/O Console – Key Features

- API Management Features
 - ~25 services across all three 3 clouds
- Events Management
 - ~12 event providers
 - Debugging and tracing features for working with Events
- Creative Cloud SDK Downloads
 - ~12 Creative Cloud Desktop Apps

Adobe I/O Runtime

I/O Runtime
**Adobe Specific
Serverless**

Core Foundation
OpenWhisk

2

Deployed on
Adobe-specific infrastructure

Multi-cloud to be close to content & data anywhere Adobe stores it

3

Custom Runtime

to support Adobe-specific workflows

Embedded SDKs for accessing
Adobe APIs

Custom languages like JSX or
HTL

Access to Adobe-specific
information like IMS variables

Adobe created functions & binaries

deployed on Runtime for use by developers

- Authentication functions to help manage authorization workflows.
- Sensei algorithms deployed as functions through Sensei Functions
- AEM Commerce functions for accessing and extending functionality.
- Functions for working with Content and Data Platforms.

Adobe I/O Runtime – Key Features

- Built on top of Apache OpenWhisk
- Developers can deploy code in NodeJs that runs on Adobe-hosted infrastructure
- Actions can be invoked by Adobe I/O Events or by HTTP functions
- Includes customized runtime with Adobe-specific features
 - Embedded SDKs/NPM for easy access to APIs
 - Helper functions for authorization or working with other Adobe services

Adobe I/O Runtime Demo

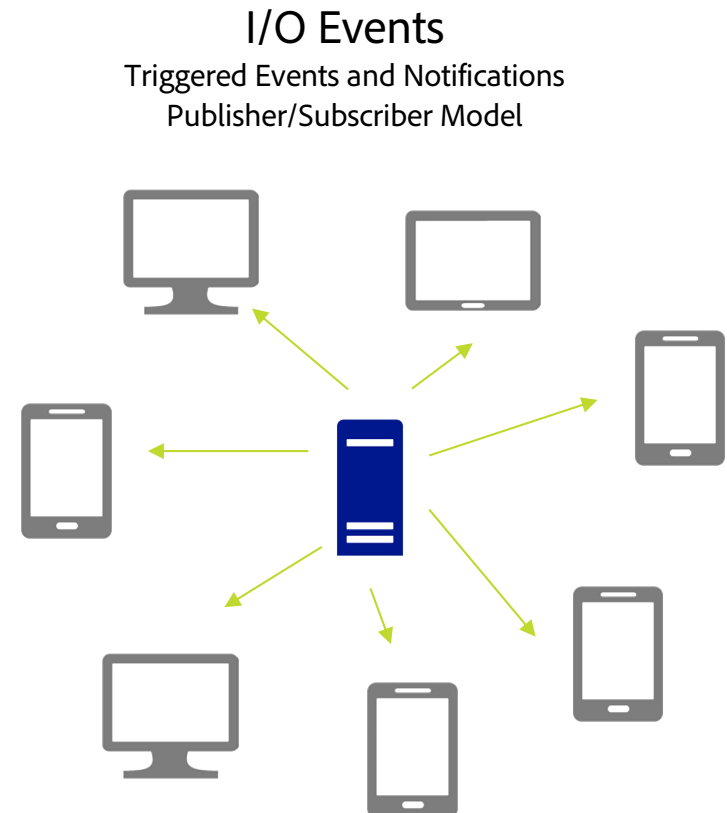

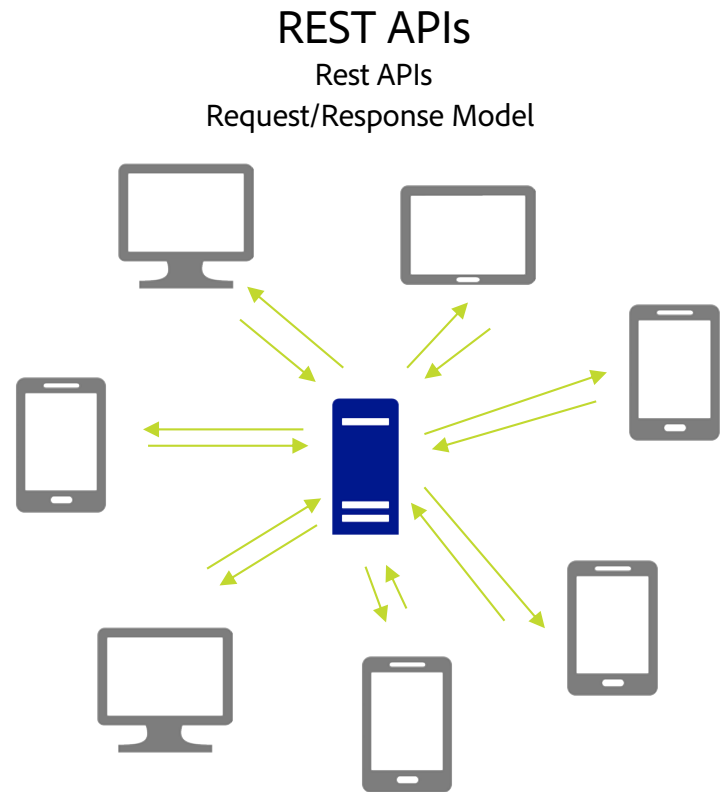

Adobe I/O Events

Embrace event-driven architecture
allowing developers to programmatically respond to user behavior,
resulting in near real-time customer experiences.

Value of Event-Driven Applications

I/O Events lets developers subscribe and respond to triggered events instead of relying on polling. This makes it easier for applications to scale and results in a more efficient architecture.

Next-Gen Platform – No Code Integrations Driven by I/O Events

MS Flow, Azuqua and More

I/O Events exposed
in low-code/no-code integration systems
like Azuqua and Microsoft Flow.

Adobe I/O Events – Sample Use Case

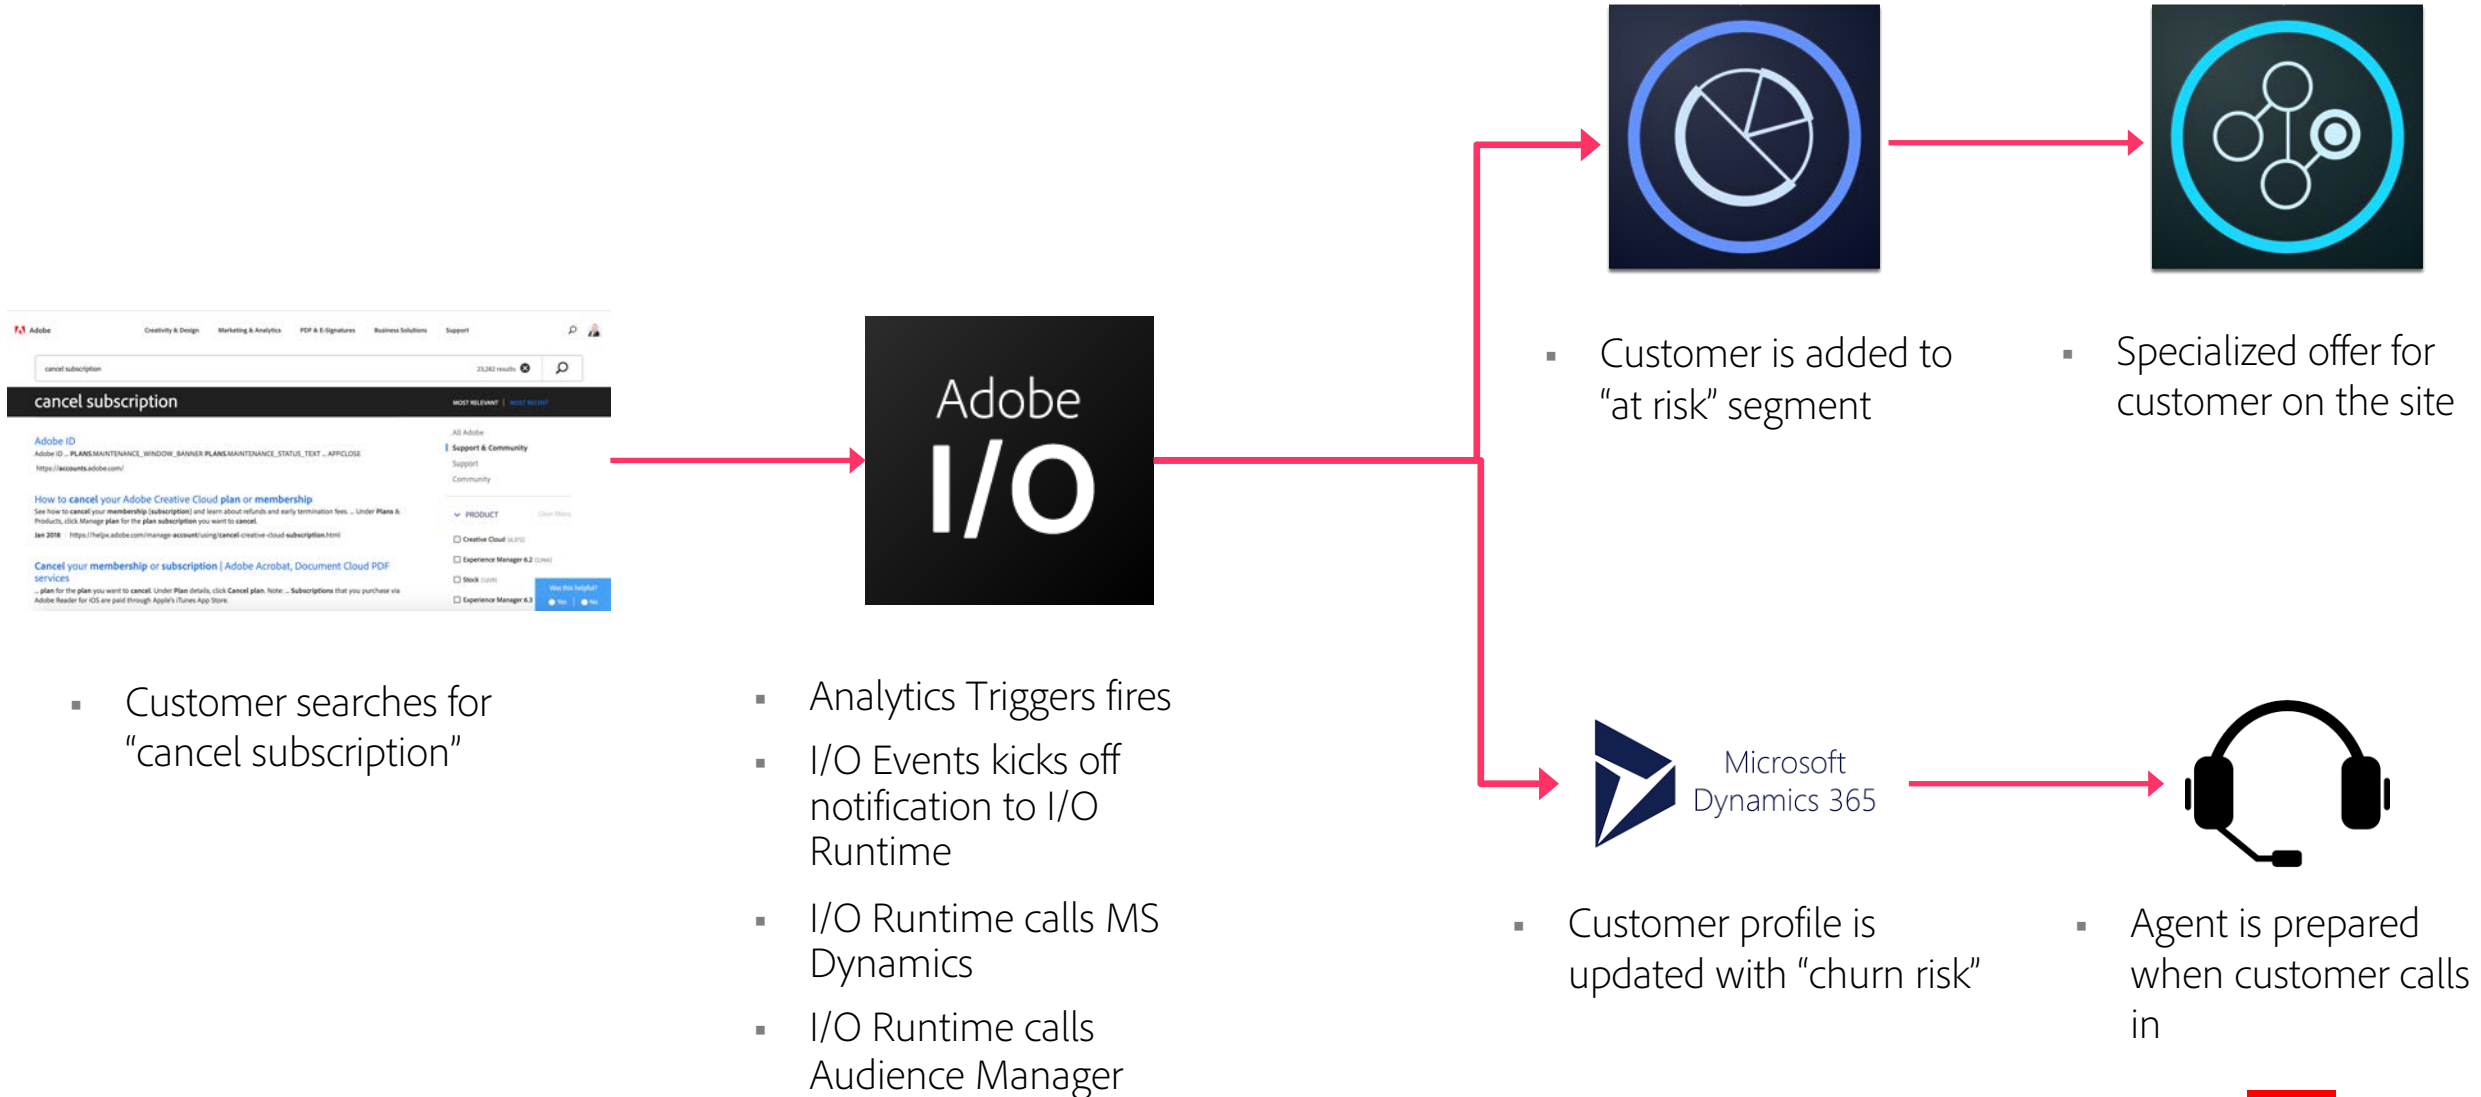

Example workflow: A designer and a developer are working on an application where the assets are stored in CC Files and the code is stored in GitHub.

Adobe I/O Events – Sample Use Case

Adobe I/O Events – Sample Use Case

Other Example Use Cases

- Document Cloud review complete -> Prompt stakeholders to sign off via Adobe Sign
- AEM asset updated -> Republish content with updated asset
- CC library created -> Copy CC library assets to a custom asset manager
- Cart abandonment on AEM website (via Adobe Analytics trigger) -> Give customer a personalized offer
- Comment added to an Adobe XD prototype -> Notify designers on the team using Slack
- Experience Cloud profile updated -> Sync a connected CRM (e.g. Dynamics 365)

Adobe I/O AEM Events

- AEM assets events (create, update, delete)
- AEM pages events (publish, unpublish)
- Any OSGI event can be turned into an Adobe I/O event

Adobe I/O Demo

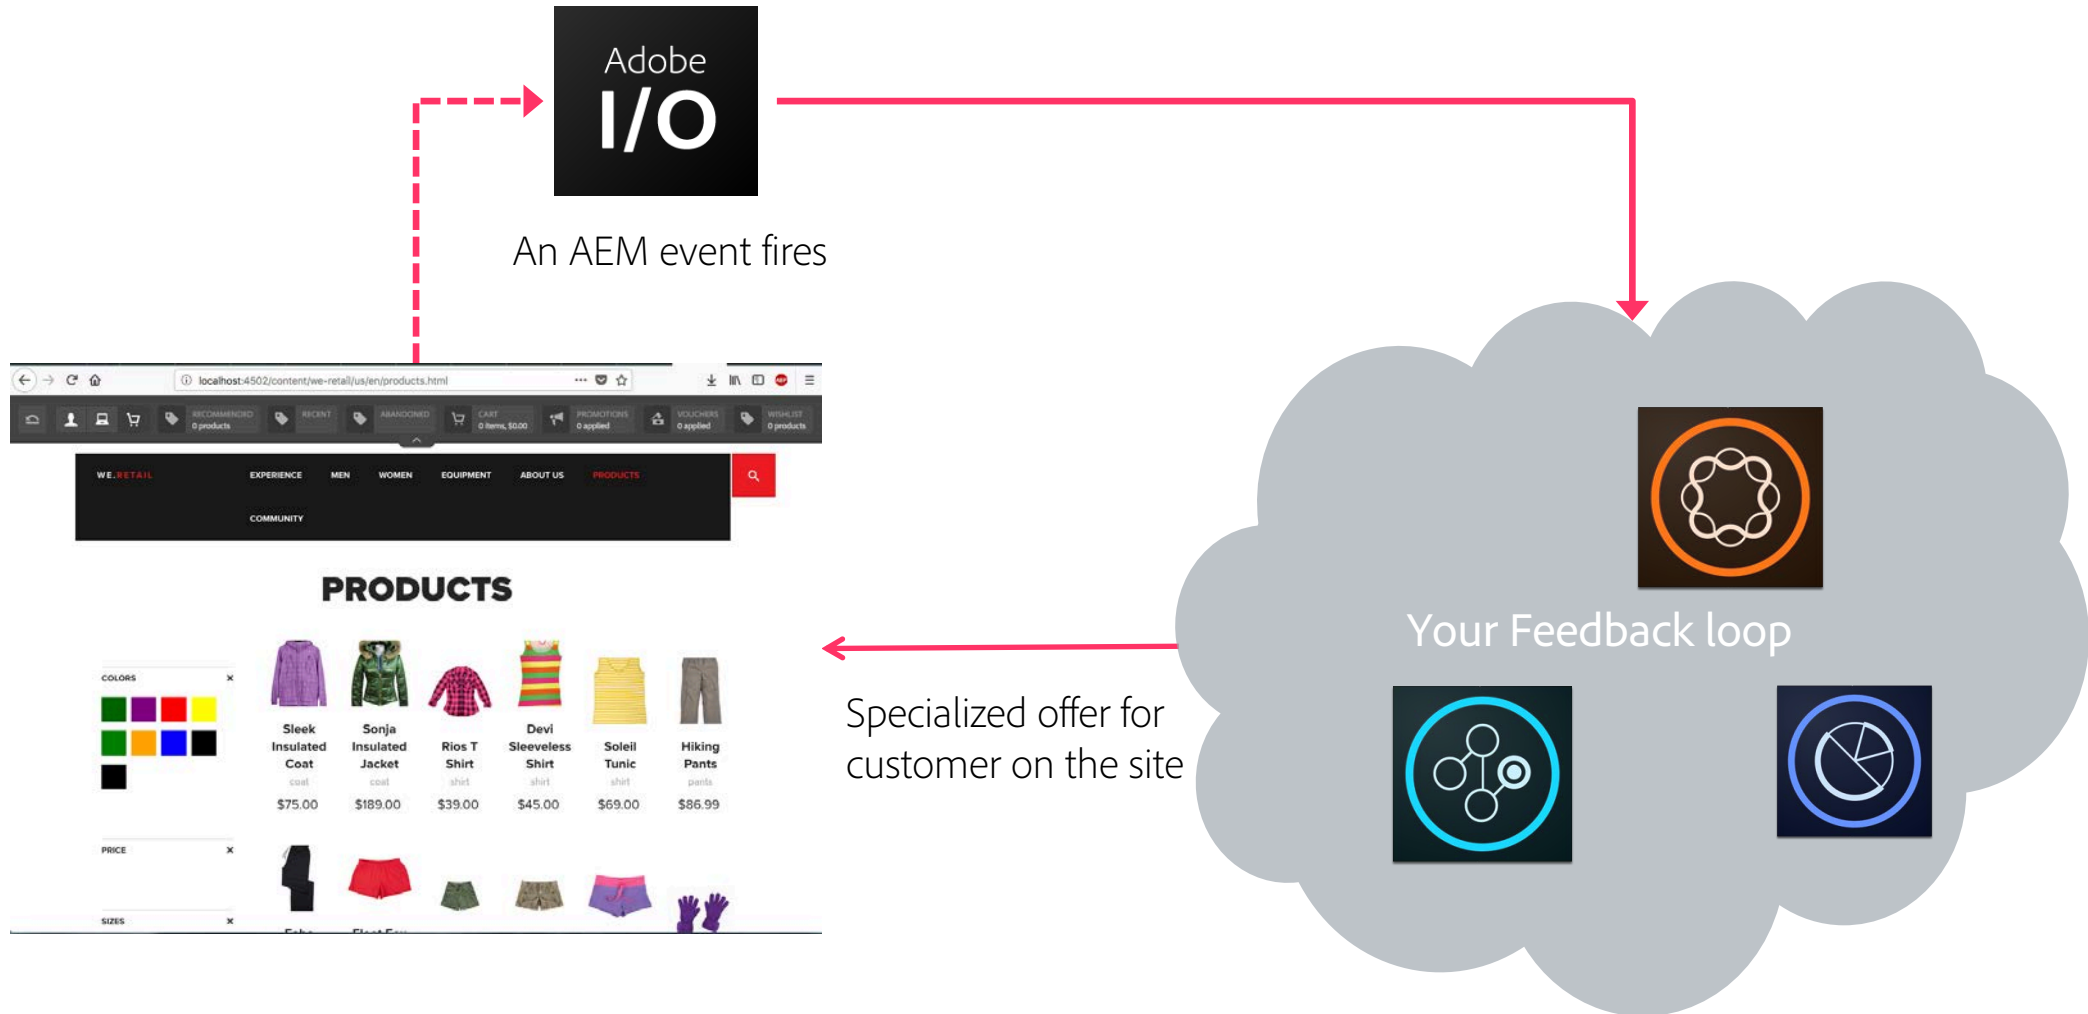

- A new asset added to AEM DAM

- AEM Event fires
- *Adobe I/O Events* invokes an *Adobe I/O Runtime* action
- *Adobe I/O Runtime* action reads the event payload and sends a message to Slack
- Notification shows up on Slack for new asset

Adobe I/O Events – Sample Use Case
